Claims Allowed

Claims 1 and 12-30 are allowable over the prior art of record. The claims are allowable because the prior art does not anticipate nor render obvious the claimed invention of: an intake system for an engine comprising: plural throttle bodies constituted by manually driven side throttle bodies having manually driven side throttle valves, which are opened and closed by a throttle operation of a rider; an electrically driven side throttle body having an electrically driven side throttle valve, which is opened and closed by an electric motor; and a valve opening control means for closing an opening of the electrically driven side throttle valve in a manner delayed by a first time constant within a range up to a predetermined regulated opening as the manually driven side throttle valves close.

No particular single feature of the claim renders the claim as a whole patentable. Only the claim taken as a whole combination is deemed new and unobvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Prior Art Discussed

The examiner has considered the references cited by applicant in his Information Disclosure Statement filed October 6, 2004. None of the references show all of the features of the claimed invention, nor do they show that it would have been obvious to one of ordinary skill in this art at the time the invention was made to combine features therefrom to create the claimed invention.

Art Unit: 3681

The references cited by the examiner are deemed pertinent to applicant's disclosure. Akiyama '360 shows an electrically driven throttle valve in series with a manually actuated throttle valve where the electric throttle valve returning speed to a fully open position is made slower than the manually actuated throttle valve, whereas applicant's invention concerns delaying the closing of the electric throttle valve relative to the manually actuated one. Tamura '102 shows a control of an electrically driven throttle valve where the opening is made different than the manually actuated throttle valve, but does not appear to show delaying the electrically driven throttle valve relative to the manual throttle valve in the closing direction. None of the references show all of the features of the claimed invention, nor do they show that it would have been obvious to one of ordinary skill in this art at the time the invention was made to combine features therefrom to create the claimed invention.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dirk Wright whose telephone number is 571-272-7098. The examiner can normally be reached on Monday through Friday, 8AM-4:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Marmor can be reached on 571-272-7095. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
